

COMPANY PROFILE

Since 2001, we have been working with small development teams of talented designers and programmers to help our clients affordably meet their online needs. We specialize in using Open Source software to build user-maintainable websites with flexible Content Management Systems (CMS). This means once our job is done, your organization can update your own website whenever you like and it is as easy as using email.

Our Open Source CMS tools of choice are Drupal (<http://en.wikipedia.org/wiki/Drupal>), the powerful and flexible community building software, and WordPress (<http://en.wikipedia.org/wiki/Wordpress>), which is perfect for smaller sites and is built for blogs. Each is customized and extended to meet your organization's specific needs. Here is a sampling of some of the websites we have developed in the past few years:

- BC Co-operative Association 2008-2009 - <http://bccca.coop>
- Centre for Asia-Pacific Initiatives (coming July 2009)
– (development site) <http://dev.capi.uvic.ca>
- BC Institute for Co-operative Studies (developed 2006-2008) - <http://bcics.coop>
- POLIS Project website redesign 2005-2008 - <http://polisproject.org>
- Canadian Social Economy Research Partnerships (developed in 2006) - <http://www.socialeconomyhub.ca>
- Planetary University website 2005 - <http://www.planetaryuniversity.org/main/>
- Vancouver International Writers Festival 1998-2008 - <http://writersfest.bc.ca>
previous years: http://www.writersfest.bc.ca/aboutus/festival_archives.htm
- ReSource Rethinking Building 2004-2008 - <http://www.rethinkingbuilding.com>
- Penelope Fibre Arts 2004 - 2008 - <http://www.penelopefibrearts.com>

Digiloom's core team is Robin Puga (Technical Project Lead) and Lindsay Kearns (Knowledge Services Lead). To meet the specific needs of our clients, we work with a variety of graphic designers and web development experts in what we like to call our "capacity collective". This organizational model gives us flexibility to develop projects of considerable scope in short time frames using the collaborative Agile Development model (http://en.wikipedia.org/wiki/Agile_software_development). We grow our team to meet your project. We recently worked with the following designers and developers:

- Jesse Spink (designer) - <http://jessespink.com>
- Baseline Type & Graphics (designers) - <http://www.baseline-graphics.com>
- Affinity Bridge (developers) - <http://www.affinitybridge.com>
